data sources: National Center for Charitable Statistics (BMF 12/2012), US Census

* Per capita here is given in terms of number of organizations or their revenue per 100,000 residents (noted at "PER 100k POP" in column headings).

** these areas are not CSAs, but are defined as CBSAs (Core-Based Statistical Areas), CSAs are comprised of multiple CBSAs

Which Metro area are ranked here and why were they chosen?

We looked at the 15 Largest CSAs (Combined Statistical Areas) in the US. In addition, we provide data for other areas frequently chosen to compare to Philadelphia that are not included in the Top 15.

Why look at CSAs? Why not CMSAs or CBSAs?

In our view, CSAs provided the most consistent ways of defining different Metro areas. Another option would have been to use CBSAs (Core-Based Statistical Areas), but these seemed to vary more widely.

For example, outlying cities of the City of Los Angeles (such as Santa Monica) are included in LA's CBSA, but to a lesser degree in the case of New York City, where Jersey City, NJ and Newark, NJ are located in a different CBSA.

As for CMSAs (Combined Metropolitan Statistical Areas), that categorization system has been replaced by the CBSA-CSA system.

Who determines the boundaries of CSAs and CBSAs?

The areas are delineated by the Office of Management and Budget (OMB) and then used by other government agencies, such as the Census. Areas are revised periodically.
